

Darshan R

Technical Product Manager | AI Products & Platforms

✉ darshanr2k1@gmail.com ☎ +91 8660457613 📍 Bangalore, India (Remote) 📄 Portfolio 🔗 [linkedin.com/in/darshan-acharya](https://www.linkedin.com/in/darshan-acharya)

PROFILE

Technical Product Manager with 3+ years of experience delivering 30+ software projects across distributed remote teams. Independently built and shipped two AI-powered products end-to-end, a feedback intelligence platform and an AI-assisted planning tool, applying tradeoff analysis, feedback synthesis, and sprint planning from concept to live deployment. Works closely with engineering teams across the full delivery lifecycle, combining product thinking with hands-on prototyping and technical execution.

PROFESSIONAL EXPERIENCE

Project Manager

OneIT Pty Ltd

04/2025 – Present

Perth, Australia (Remote from Bangalore)

- Delivered 30+ custom software projects with 95% on-time delivery rate across diverse industries
- Coordinated and guided a distributed remote team of 10+, reducing delivery delays by 20% through structured sprint planning and async communication
- Tracked and maintained delivery roadmaps across concurrent software projects; translated client and stakeholder inputs into prioritized backlogs and coordinated sprint-ready work across engineering and QA teams
- Gathered and synthesized recurring client feedback across projects to identify workflow pain points, then translated findings into prioritized improvements delivered in subsequent sprints

Associate Project Manager

OneIT Pty Ltd

02/2023 – 03/2025

- Co-owned backlog prioritization and sprint planning across multiple client-facing software projects within Agile delivery cycles
- Translated business requirements from client stakeholders into structured user stories and sprint-ready development tasks for engineering handoff
- Collaborated with engineering, QA, and design teams across distributed timezones by establishing async update protocols and sprint check-ins to keep delivery moving across handoffs

TECHNICAL PROJECTS

Task Board

AI-Powered Product Planning Tool

- Designed a planning tool around a single PM problem: of everything on the board, what deserves the team's time — and what should be declined
- Built impact/effort scoring (AI-suggested, human-confirmed) feeding a live priority matrix (Quick Wins / Big Bets / Fill-ins / Time Sinks) and an AI-ranked backlog with per-task reasoning
- Designed AI interactions deliberately: on-demand analysis (not continuous) to respect user workflow, stale-flagging when the board changes, and per-task reasoning so users can override the model with context
- Stack: React · Supabase · Groq API · GitHub Pages

Pulse

AI-Powered Feedback Intelligence Platform

- Identified a recurring failure pattern across 30+ client projects — teams collect feedback but rarely convert it into decisions — and designed Pulse to close that gap
- Defined core product logic: AI classifies feedback by sentiment and category at intake; the PM confirms or overrides; on-demand analysis returns a ranked priority list with written rationale per item
- Made explicit tradeoffs: fixed category taxonomy over model-generated categories for week-over-week trend consistency; on-demand analysis over continuous re-ranking to preserve PM decision authority
- Stack: React · Supabase · Groq API · GitHub Pages

SKILLS

Product: Backlog prioritization, roadmapping, sprint planning, user story writing, stakeholder management, tradeoff analysis, feedback synthesis, 0→1 product development

Technical: React, Supabase, PostgreSQL, Groq API, AI/LLM integration, REST APIs, GitHub

Tools: JIRA, Trello, Slack, Mixpanel, Google Sheets

Delivery: Agile, Scrum, remote team coordination, async collaboration, risk management

EDUCATION

BSc Biotechnology

MS Ramaiah College

CGPA: 7.9 - Bangalore

CERTIFICATES

- Google Project Management Professional Certificate – Coursera
- Accenture Project Manager Virtual Experience – Forage
